Environmental Specialists

Integ Systems Corporation

Critical Power and Environmental Specialists

The Company

Mission Critical, High 9's, Fault Tolerant, N+1, Highly Available (HA) Environment, and Redundant Parallel Architecture is the language that **Integ Systems Corporation** speaks. If you speak the same language, then **Integ** can provide products and services for your application.

Integ Systems designs, supplies and services integrated power protection and mechanical support systems for data, communication and industrial facilities. The company's mission is to be the leader in critical electrical/mechanical support systems by integrating the most reliable products available into the most reliable systems available. **Integ** can then maintain these systems to ensure a dependable facility for the data and communications equipment.

Integ Systems is well positioned to take advantage of the condition that exists in the market. Suppliers are not always identifying the actual needs of the end user, nor are they evaluating the clients' short and long-term requirements. The need existed for a high-quality, systems-oriented, user-driven supplier to fill this void. By teaming up with professional business partners, we have the ability to accomplish this task and provide a value added alternative.

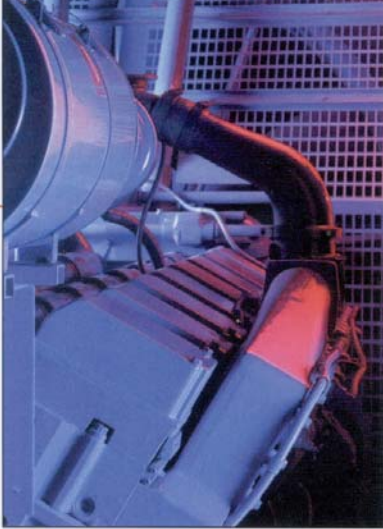

Working in the customer's best interest is the heart and soul of our business.

Applications

Integ Systems works in the High Tech Space environment. The primary applications revolve around Data/Network, Telecom, and Industrial markets. The Data/Network market consists of the traditional data center environment and the distributed network/server room setting. The Data/Network market continues to change, requiring a team that offers a

cutting edge approach. The Telecom market has been exploding for several years with an expected growth that will continue over the upcoming years. **Integ** has worked closely with several Telecommunication companies assisting in the build-out of facilities on a national basis. This national approach has transferred over to the Telecom Hotel concept. **Integ** continues to apply our methodology to those facilities on a national level. Lastly, the Industrial market has continued to progress into high tech requirements for motor control rooms, printing facilities, and a whole host of industrial applications that require the products and services offered by **Integ Systems**.

Conceptual Design

Integ Systems collaborates with business partners offering a myriad of services. Integ will often provide conceptual designs that allow a project to move on the required fast track. The conceptual design also allows critical electrical/mechanical equipment to be pre-purchased, ensuring a timely delivery and on-time project completion. The process continues by working closely with Engineers, Architects, Construction Managers, General, Mechanical, and Electrical Contractors to ensure that the project proceeds on schedule. Working in the customer's best interest is the heart and soul of our business. Whether that interest is as an owner's representative or as a team player with other business partners, Integ maintains the customer's goals as the driving force behind our designs and decisions. The basis behind our design process is a system concept philosophy that not only offers **Built-In Redundancy**, when required, but also ensures **Built-In Maintainability**. Without both concepts working in harmony, the system uptime can be severely impaired.

Products

Integ Systems operates in many capabilities, depending on the project requirements. We are a bit of a chameleon at heart, always changing to meet the requirements. In many cases, Integ acts as an Equipment Contractor providing all the critical electrical/mechanical equipment for a given project. We supply and integrate auxiliary power generation equipment, paralleling and switching controls, uninterruptible power systems, DC communication rectifiers, switchboards, switchgear, power distribution units, harmonic filters, transient voltage surge suppression, facility monitoring and management systems, batteries, computer room air conditioning systems, and raised floor to meet the customers operational requirements. These items often have a lengthy lead time that requires pre-purchasing to ensure timely delivery. Contracting all of these products under a central procurement approach assures one source responsibility and system compatibility. Like pieces of a puzzle, we are able to integrate all the pieces to complete the whole picture.

Services

Integ Systems presents a complete offering of services to compliment the systems approach. Our services include site surveys, owner representation, installation supervision, comprehensive service contracts, monitoring and management capabilities through a NOC center, and site commissioning with load bank testing. Integ's ultimate goal is to provide the support and services required to ensure trouble-free installations today and into the future. Additionally, our capability to monitor and manage the critical electrical/mechanical equipment is a valuable asset that ensures operational integrity for years to come.

APPLICATIONS

- ▶ Data Processing Centers
- ▶ Telecommunication Facilities
- ▶ Network Operations
- ▶ Industrial Applications

PRODUCTS

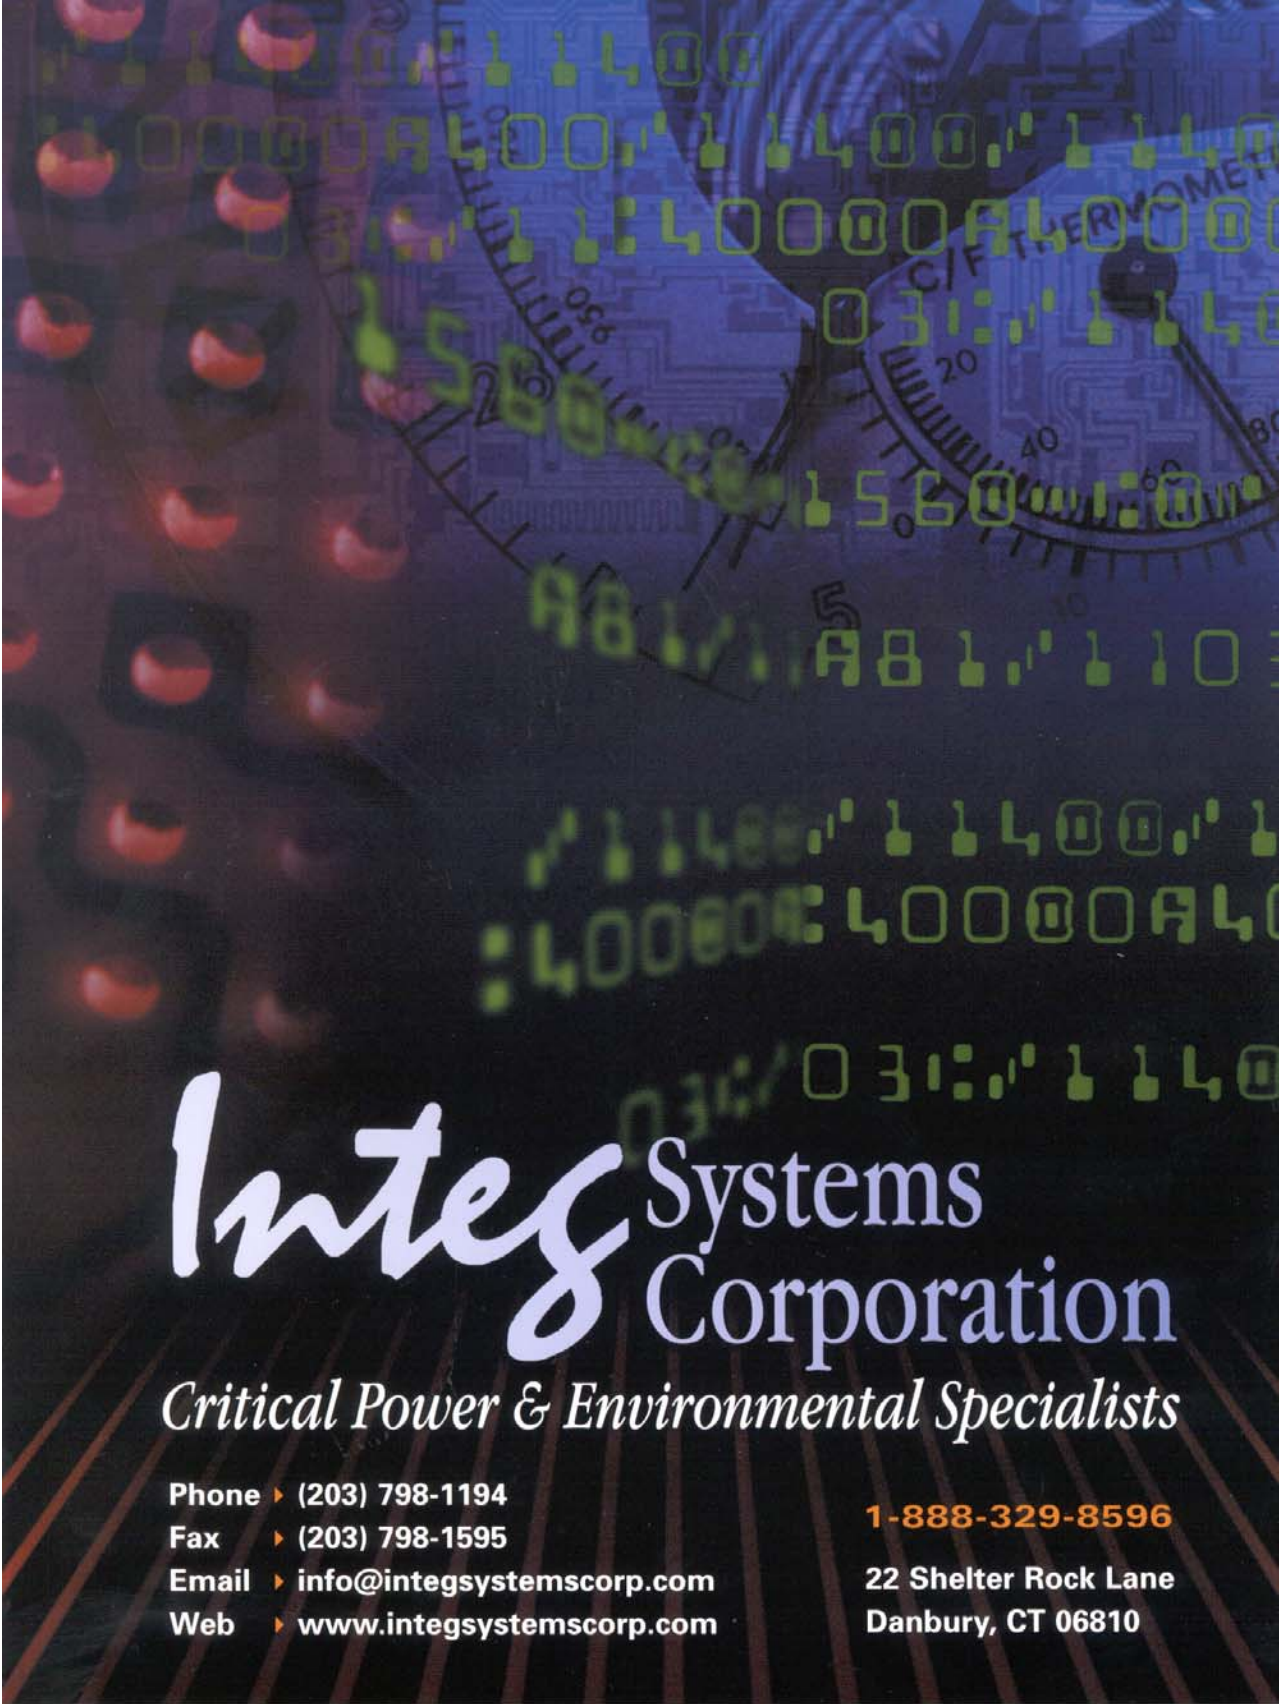

- ▶ Static Uninterruptible Power Supply Systems
- ▶ Diesel and Turbine Generators
- ▶ Paralleling Gear
- ▶ Electrical Distribution Switchgear
- ▶ Power Distribution Units
- ▶ Harmonics Cancellation/Filtration
- ▶ Transient Voltage Surge Suppression
- ▶ DC Rectifier Systems
- ▶ Computer Room Air Conditioning Units
- ▶ Water Detection/Battery Monitoring Systems
- ▶ Complete Site Monitoring/Management Systems
- ▶ Raised Flooring

SERVICES

- ▶ Owner Representative
- ▶ Site Commissioning
- ▶ Monitoring - Integ NOC Center
- ▶ Conceptual Design
- ▶ Site Surveys
- ▶ Installation Supervision
- ▶ Comprehensive Service Contracts
